SUMMARY

Third-year Computer Science student (B.Sc. expected Nov 2026) with hands-on experience building Generative AI and LLM-based solutions: AI agents, Python automation, and REST API integrations. Ships production-grade tooling backed by 1,400+ automated unit and integration tests, CI/CD, and separate staging/production environments. Strong system-thinking approach to bridging software and IT infrastructure.

TECHNICAL SKILLS

Languages: Python, TypeScript / Node.js, SQL, PowerShell

AI & ML: Generative AI, LLM APIs & AI agents, prompt engineering; classification models, supervised & unsupervised learning, feature selection

Back-End: REST / RESTful APIs, JSON, Regular Expressions (REGEX), client-server architecture, webhooks

Data: PostgreSQL, MongoDB, Firebase (NoSQL), ETL processes & data pipelines

DevOps & Quality: Docker, CI/CD (GitHub Actions), Git, staging / production environment management, unit testing

EXPERIENCE

AI & Automation Developer | High Networks Ltd | 2025 – Present

- Designed and built a server audit and remediation platform (Node.js / TypeScript, Express, PostgreSQL, REST API) covering 49 operational checks, with 1,400+ automated unit and integration tests running in CI.
- Developed agentless PowerShell collectors and LLM-based AI agents that centralize infrastructure data into a bilingual dashboard, significantly reducing manual audit labor.

NOC Engineer | Tevel Metro | 2026 – Present

- Monitor servers and critical network infrastructure; built HTML/JS support utilities that automate recurring checks and trained team members on them.

IT Support Technician | Priority Software | 2024 – 2025

- Provided technical support across hardware, software, and network infrastructure, and managed Priority ERP systems.

PROJECTS

Hermes | Hierarchical AI Agent System

- Python-based system of LLM-powered agents orchestrated via Telegram: webhooks, REST integrations, and task delegation across specialized sub-agents.

PuppyCare | Smart Kennel IoT Monitoring System | [Live Demo](#) · [GitHub](#)

- Real-time sensor data pipeline: Python on Raspberry Pi streaming to Firebase (NoSQL), with FCM push alerts and a SwiftUI iOS app for live dashboards.

EDUCATION

B.Sc. in Computer Science | Ono Academic College | Expected: November 2026

Military Service | IDF, Combat Operations Analyst (Marine Unit) | 2020 – 2022
